

SECURE SERVERLESS PRINTING WITH PRINT&FOLLOW.

THE **HYPAS™** APPLICATION FOR **MORE SECURITY AND EFFICIENCY.**

You certainly know how annoying it is when you quickly need a printout and the device you sent the document to is busy printing a large document. In such a situation, you can either send the document again to another device, accepting that it will be printed twice and left unattended in the original printer's tray, or wait until the printer is ready to process your job.

With our embedded HyPAS™ application Print&Follow, such situations can easily be avoided. Print&Follow stores all print jobs on a central MFP server that all devices can access. You can log in at any free device in your office to print your documents, thereby avoiding print queues and increasing the security of your data.

BUSINESS CHALLENGES

- > To ensure document confidentiality and avoid printouts being left unguarded in printer trays, we use costly desktop printers – **Is there a more economic solution?**
- > When a printer is busy, users often send their document again to another one, which means that the document will be printed twice – **Can this waste be prevented?**
- > We do not have an IT department to manage complex document solutions – **Is there a solution for small businesses?**

YOUR ADVANTAGES WITH PRINT&FOLLOW

- > **Security:** A shared MFP equipped with Print&Follow ensures the same level of confidentiality as a personal desktop printer while being much more cost-efficient.
- > **Flexibility:** As all MFPs can access the server, users can log in at any free device to release their documents.
- > **No server:** The application does not need an extra server and can be maintained without extensive IT support.

YOUR OUTPUT SECURITY IS OUR PRIORITY

KYOCERA offers a wide range of solutions that will help to ensure your output environment is totally secure. From small business to high security organisation, Kyocera will advise you on the best security solution that fits your business needs.

FEATURES & SPECIFICATIONS

Print&Follow can be installed on most KYOCERA MFPs and no extra server is required for the system to work. All you need to do is to install the KX driver on all users' PCs and an A3 MFP for the application. This device then becomes the manager device; its server is where the various print jobs are stored. Once the application is installed, users can log in at any device with a password, a PIN code or an ID Card. The device then displays their personal print job list, where they can choose the documents they would like to print. Of course, it is also possible to delete print jobs from the job list without printing them.

Print&Follow is easy to set up, and the service will greatly increase the security of your documents and the overall efficiency of your printer fleet, while at the same time significantly decreasing the amount of paper waste. Moreover, KYOCERA offers you the opportunity to test the application for free to find out if the system corresponds to your needs.

No extra server – the server of the manager MFP is used to store all print jobs.

Fast and easy – the intuitive installation and interface guarantee that anyone can operate the application without difficulty.

Easy login – with a PIN, a password or ID Card.

Job list – increases printing flexibility and ease of use. Jobs remain on the list until they have been printed or deleted.

Security – data encryption and authentication ensure that your documents can be accessed and printed by authorised people only.

Small businesses – this application is particularly recommended for printer fleets with up to 5 devices.

PRINT&FOLLOW COMES IN 2 VERSIONS

Print&Follow SE is the basic version that matches ideally the requirements of small companies or departments.

Print&Follow AD can be used in an Active Directory environment and offers additional benefits like single sign on. This version also supports basic print rules: define who may use which device function.

SYSTEM REQUIREMENTS

- > KX driver 5.3 or newer is needed on the client PCs.
- > HyPAS-enabled and HyPAS-capable devices.
