BETTER WORKFLOW WORK EXPERIENCE

Scanning. Let's be honest, it's not a job that most people enjoy. That's because it can be tedious and time consuming.
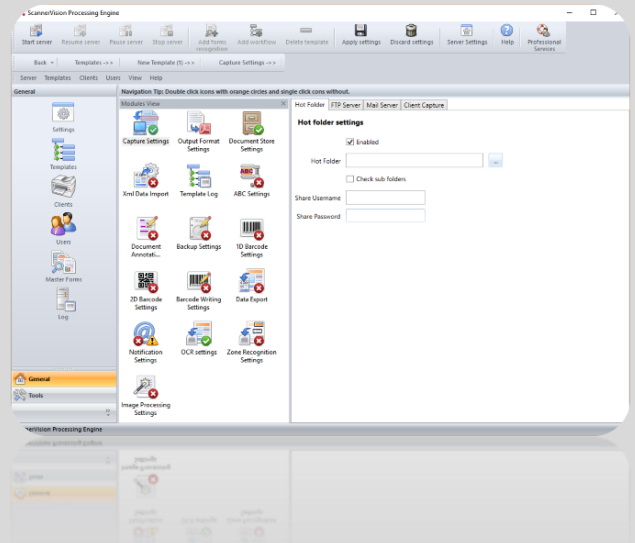

Most of us try to avoid it because of the hassle of editing every scanned item, choosing the format and saving it in the correct place. Surely there's a simpler way?

Automated document capturing

ScannerVision™ is the low effort alternative to traditional scanning. With one click, approved users can scan, digitize, format, store, tag, route and optimize all your documents.

Now you can work more efficiently, with fewer errors and less training. Our philosophy is simplicity and we believe that the complexities of traditional document processes and policies are unnecessary and can be completely avoided thanks to new technology.

ScannerVision™ frees you to get on with the parts of your job that you really enjoy.

Open multi-platform solution

Flexible and adaptable

All kind of environments

Easy to integrate wit thirds

User friendly interface

Easy management

scannervision™

v7

ScannerVision™ can operate from the Touch screen panel of most of the popular multifunctional devices, or from your PC desktop with our Desktop client.

Would you like your scan to be filed automatically in the right place and in the right format? And then to be able to retrieve it easily and even search inside it?
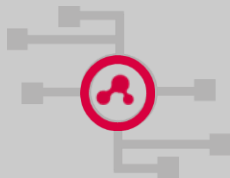

Now you can. It's easy to customize every step of the process so that everyday jobs take no time at all.
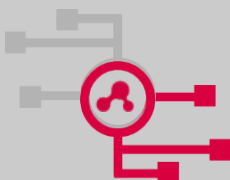

Step 1	Capture

Place your documents on the scanner or load your existing electronic media (such as a TIFF/PDF file archive) into ScannerVision™.

Step 2	Process

Select a pre-programed process or document from the user-friendly interface. Image enhancement and many other actions can be done automatically.

Step 3	Store or distribute

Press the Start key. The document will automatically be saved in your desired format and directory, or distributed via corporate address book to file server.

Centralized workflow

Press the Start key. The document will automatically be saved in your desired format and directory, or distributed via corporate address book to file server.

Minimum Hardware

Windows Operating System (OS) running
on computer with at least a 2 GHz CPU
Minimum 2 GB recommended;
4 GB or greater is preferred
Minimum 10 GB of hard disk space
NIC Card

Operating System

- Windows Vista SP2
- Windows Server 2008
- Windows 7 SP1
- Windows Server 2012
- Windows 8 / 8.1
- Windows 10

Other requirements

- MS .NET 3.5
- MS .NET 4.6
- MS C++ 2008
- MS C++ 2012

ScannerVision™ is much more than a scanning software. It makes every aspect of processing, storage and distribution easier
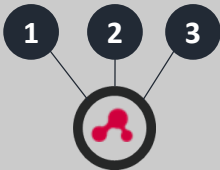

WATCH THE VIDEO

Would you like to know more?

We know sometimes is difficult to understand how each of the functionality works just reading a short description. That's why we've created a special video for each of the functionalities described. Just scan the QR code!

Conditional SEE

SEE offers the full use of Regular Expression to select parts of or even modify metadata before it is used. The SEE also shows the expected output in real time so no more guessing what the outcome of your expressions will be. In ScannerVision V7 we have raised the bar even further with an improved SEE. You will now be able to apply conditions in your expressions!

Conditional Connector Execution

Now you have the option to specify the conditions under which a connector executes. Conditions can be based on the presence of a word in the metadata, numbers equal to, smaller than etc. Any metadata extracted from the document can be used whether it is 1D or 2D barcodes, Zonal OCR or full text OCR to drive the conditions for connectors.

Zone Recognition

Automatically capture data from specific zones on the document. Zones for all 4 supported zonal OCR functions namely Zone OCR, ICR, MICR and OMR can be configured in the same interface using the same sample document (which is stored in the template!) and on multiple pages! You can also now name your zones! This makes it much easier to identify different zones.

Barcodes and QR codes

ScannerVision™ can extract information from 1D and 2D barcodes to use in the metadata or add barcodes into scanned documents for easier processing later on. It's possible to specify advanced settings for each individual barcode and also to supply sample data which will then appear automatically in the SEE as the tag data when the metadata is used.

New in v7

ScannerVision Forms recognition

Forms recognition option will automatically recognize each document and will process using the right template. There's no need to use different buttons or create different categories, Forms recognition will do this job automatically making the process faster and easier. Forms are unlimited and the form creation process is totally automatic.

FEATURES

V7

ScannerVision™ is much more than a scanning software. It makes every aspect of processing, storage and distribution easier

Full Connectors Range*

Perform any file-based task quickly and easily, such as file transmission and document system communication with Connectors that link the Processing Engine to proprietary document management systems and file servers. Upload your document directly to a host of web servers, online web services and third party applications, thanks to the wide range of connectors available.

New in v7

Bi-directional Connectors

Do live browsing against their part applications. Bi-directional connectors makes it possible to select from a picklist the exact folder or library from the final output site in real time. If you combine this option with the new forms recognition module you can really create an advanced workflow and at the same time really user friendly! More power and less work.

New in v7

Advanced SQL Connection

At ScannerVision we are always listening to our customers. One big demand has always been the possibility to retrieve from one single database more than one value in one single query. Now, with the new SQL connector this is possible, you can filter results and extract all required information and data in just one connector.
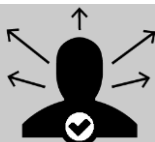

Dual OCR Engine

We all know that not all documents are the same and for this reason we offer with ScannerVision V7 an additional OCR engine. With the choice of 2 OCR engines the user is able to choose the best OCR engine for a particular type of document. This choice is possible on a per template basis. In the template a user can specify which engine to use.

New in v7

Single Sign-on Functions

Connect your ScannerVision server with a wide range of accounting and security software like Papercut, Equitraq, MyQ, KYOCERA Net Manager , aQrate or Ubiquiteq. The single sign-on functionality will make the authentication process easy and secure. Users will be able to authenticate over any of those software and have immediate access to their own workflows at a ScannerVision embedded client.
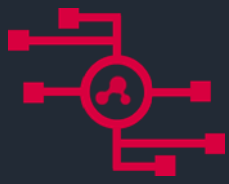

New in v7

### Web Based Clients

Much easier to deploy and much easier to customize!
The new web clients maintain the speed from the embedded clients adding the full customization feature. Now you'll be able to install the client without installing anything into the MFD. Also, by just changing the CSS located in SV server folder you'll be able to change the look and feel from all your MFD's.

ScannerVision Store and standard connectors

- **Conditional connector execution**
- **Multi-instance connector execution**

- Microsoft Windows File System
- SQL
- Email
- WebDav
- File Transfer Protocol (FTP)
- Script (VbScript 7 JavaScript)

ScannerVision Store and optional connectors

- NET Documents
- Laserfiche Link
- M-Files
- Xplan
- Unit4 / Hyarchis
- Evernote
- MyDoc
- iCAB
- DocuWare

- Dropbox
- Sharepoint / Online
- Google Drive
- Sage One
- One Lite
- DocQuijote
- Exact
- Afas
- Multivers

ScannerVision SDK

- **There are no limits!**

Connectors link ScannerVision directly to the documents of an organization or Business system management. Using a connector, ScannerVision power can be routed to the correct location within a DMS or ERP, within minimal user intervention. ScannerVision also supports WebDAV protocol based on market standards, allowing connections with one range of more and more companies and systems of documents.

General

- Full user interface including connectors and modules
- Workflow Import / Export tool
- ScannerVision V4/V5/V6 automatic workflow conversion tool
- Automatic workflow integrity check system
- Professional Services custom screen
- Equitraq authentication / Single Sign On

- PaperCut authentication / Single Sign On
- MyQ / KYOCERA Net Manager , aQrate authentication / Single Sign On
- ScannerVision's tool panel
- Language selection
- User interface protected by password
- 3 Levels log system

ScannerVision Capture

- Capture documents from a Hot-Folder structure (including sub-folders)
- Capture from FTP source
- Capture from eMail source. POP3, IMAP and SMTP servers (including SSL)
- Capture from Twain compatible devices
- Scanned document preview

- Fill metadata automatically selecting the desired field (built-in OCR engine)
- Picklist creation from multiple sources (SQL, XML, LIST, BROWSE, VBS)
- Capture process timer
- Multi capture

ScannerVision Document Process

- ScannerVision Professional OCR Engine
- ScannerVision Advantage OCR Engine
- Selectable output format (BMP, GIF, JPEG, JPEG2000, PCX, PDF, PNG, PS, TIFF, WMF, DOC, XLS, RTF, SPDF, PDF/A, XPS)
- Pre-Defined output format
- File Summary Info can be completed by using metadata for each document
- ABC compression module
- 1D Barcode reading (Including Document Splitting)
- 2D Barcode reading (Including Document Splitting)
- 1D and 2D Barcode writing
- Export metadata values and OCRed text to XML / TT / CSV and HTML formats
- Visual Basic Script and Java Script execution during template execution

- Forms recognition module
- Image Processing Settings module (include blank page removal, border removal, etc...)
- Document annotation module (Insert watermarks and customizable stamps based on metadata)
- ScannerVision Expression Editor tool including conditional metadata expressions
- Zonal OCR engine with custom metadata fields and multi-page documents compatibility
- Optical Mark Recognition module (compatible with Zonal OCR)
- Magnetic Ink Character Recognition module (Compatible with Zonal OCR)
- Intelligent Character Recognition (ICR) (Compatible with Zonal OCR)
- User customizable email notifications
